Num of Trains=10 (5 up, 5 down)
End_sim_time = 20000,
getSpottingsNowTime = 10000,
peakThres=5 (500 meters both sides)
PosConf calculated for each point at distance of= 100 meters
Starting time gap between trains=30 min (1800 sec)
Halt_time_of_Train = 20 sec
Speed_of_The_Train = 14 m/sec (50.4 km/h)

0.1 No. of passengers=10000

0.1.1 central up route

Table 1: Ground truth value

Positions	NearestEstDis
m	m
6286.00	314.00
15 202.00	298.00
28 116.00	284.00
33 886.00	314.00
51 074.00	226.00

Table 2: Estimated Value

Positions	NearestTruthDis
m	m
6600.00	314.00
15 500.00	298.00
